

BakerIQ

Platform Overview & Status Report

bakeriq.app

Executive Summary

BakerIQ is a professional SaaS business management platform designed specifically for bakeries. The platform combines CRM, quoting, contracts, payments, and email automation into a streamlined, baker-centric solution with modern design and comprehensive features.

Platform Status

Production-ready and fully tested

Domain

bakeriq.app

Design Philosophy

Modern UI with clean white backgrounds, orange accent colors (#f97316), and comprehensive dark mode support for professional presentation.

Core Features Implemented

Customer & Lead Management (CRM)

- Complete customer database with contact information and order history
- Lead capture and tracking system
- Status management (new, contacted, quoted, booked, declined)
- Filter leads by status with live counts
- Quick actions to convert leads to customers
- Customer inquiry tracking with message history

Quote & Contract System

- Professional quote builder with line-item detail
- Quote templates for faster creation
- Email delivery with tracking (visual sent indicators)
- Quote item management with pricing calculations
- Convert quotes to contracts workflow
- PDF generation for professional estimates
- Quote history and management dashboard

Pricing & Calculator

- Interactive cake pricing calculator
- Dynamic cost calculations (tiers, size, flavors, decorations)
- Real-time pricing updates
- Public-facing calculator for customer estimates

Baker Directory & Profiles

- Searchable baker directory
- Location-based filtering with proximity search
- Baker profiles with specializations and portfolio
- Tenant-based routing (e.g., /demo/sweet-dreams-bakery)
- Public-facing baker profile pages

Additional Features

Ø=Ý Authentication & Security

- Baker registration and login system
- Complete password reset flow with secure token-based email verification
- 15-minute token expiry with single-use enforcement
- SHA-256 token hashing for security
- Email enumeration prevention
- Email verification for new accounts
- Session management with PostgreSQL store
- Super Admin authentication system

Ø=Üç Email Automation

- AWS SES integration for reliable email delivery
- Professional branded email templates
- Quote delivery emails
- Lead notification emails
- Password reset emails
- 7-day conversion campaign automation (free-to-paid)
- Subscription lifecycle emails (trial warnings, expiration)

Ø=Ü³ Payments & Subscriptions

- Stripe integration for payment processing
- Subscription management (Free, Professional, Plus tiers)
- Billing dashboard for bakers
- Subscription lifecycle automation
- Payment tracking and history

Ø=ÜÊ Business Management

- Dashboard with business metrics
- Booking management system
- Quote and contract tracking
- Customer communication history
- Analytics foundation

Technical Architecture

Frontend Stack

- React 18 with TypeScript
- Vite build system with hot module replacement
- Shadcn/ui component library (Radix UI primitives)
- TanStack Query for state management
- Wouter for routing
- Fully responsive design with dark mode support

Backend Stack

- Node.js with Express framework
- TypeScript with ES modules
- RESTful API architecture
- Drizzle ORM with PostgreSQL
- Neon serverless database

Infrastructure & Services

- PostgreSQL database (production-ready schema)
- AWS SES for email delivery
- Stripe for payment processing
- Session persistence with connect-pg-simple
- Environment secret management
- HTTPS/TLS ready for production deployment

Development Architecture

- Shared TypeScript configuration across modules
- Path aliases for clean imports
- Hot reload for development
- TSX for server-side TypeScript execution
- Automated database migrations with Drizzle Kit

Current Project Status

Recent Accomplishments

- Rebranding Complete: Bakewise! BakerIQ across entire platform
- Quote System Debugged: Fixed stub implementation, quotes display correctly
- Password Reset Implemented: Complete secure flow with email verification
- Email Tracking Active: Visual indicators for sent quotes
- Calculator Verified: Public calculator working with interactive UI
- End-to-End Testing: Password reset flow fully tested and verified

▪ Ready for Deployment

- All core features tested and functional
- No critical errors in codebase
- Database schema properly migrated
- Security measures implemented
- Email templates integrated and working

Ø<β Demo Environment

- Live demo tenant: /demo/sweet-dreams-bakery
- Fully functional quote builder
- Active CRM with lead/customer workflow
- Working calculator with pricing

Platform Metrics

- Tech Stack: Production-grade (React, TypeScript, PostgreSQL, Stripe)
- Security: Password hashing, secure tokens, session management, HTTPS-ready
- Scalability: Serverless database, autoscale-ready architecture
- Reliability: Comprehensive error handling, validation, tested workflows

Competitive Advantages

1. Baker-Specific Focus

Built exclusively for bakery businesses, not a generic CRM. Every feature is tailored to the unique needs of cake and pastry businesses.

2. All-in-One Solution

Replaces multiple tools (CRM, quoting software, contract management, payment processing) with one integrated platform.

3. Professional Design

Modern, polished UI that impresses customers and reflects well on the baker's brand. Mobile-responsive with dark mode support.

4. Email Automation

Hands-free conversion campaigns and lifecycle management. Automated follow-ups turn more leads into customers.

5. Flexible Pricing

Free tier with upgrade path to Professional/Plus. Bakers can start free and grow with the platform.

6. Easy Onboarding

Simple signup process with immediate value. No complex setup - bakers can start managing customers right away.

Next Steps

Immediate Actions

- Deploy to production (platform is ready)
- Launch marketing and baker onboarding campaigns
- Monitor initial user feedback and analytics

Short-term Enhancements

Platform Ready

BakerIQ is production-ready and positioned to serve bakeries looking to professionalize their business operations.

- ' All critical features implemented
- ' Comprehensive testing completed
- ' Security measures in place
- ' Ready for real-world deployment
